Introduction to Fleet Commander

Linux Desktop Meetup Brno Oct.2016 Oliver Gutierrez

Large workstation deployments

A hell for the sysadmins

Main tasks:

- Deploy software on machines and configure them
- Deploy user configuration and personal files

Deploying machines

- Configuration management systems
 - Ansible
 - Chef
 - Puppet
 - O ...

Deploying profiles

- APOC (2006)
- Sabayon (2007)
- ??? (usually custom made scripts)

Fleet Commander

- Easy to manage profiles
- Easy to add settings to that profiles
- Easy to deploy that profiles to the network
- Transparent experience for the final user

Easy to manage profiles

- Graphic session for software configuration
- Web forms for specifying special configurations

Easy to deploy

- Any web server should be able to serve profiles data
- Minimal software installation on client machines for applying configuration at login time

Fleet Commander components

- Fleet Commander Admin
- Fleet Commander Loggger
- Fleet Commander Client

Fleet Commander Admin

- Profile management
- Web based (Cockpit plugin)
- dbus service as backend

Fleet Commander Logger

- Logs configuration changes during Live Sessions
- Transfer that changes to Fleet Commander Admin for reviewing
- Only needed in template virtual machines
- Only activates in Fleet Commander live sessions

Fleet Commander Client

- Downloads profiles from profile server
- Compiles all profiles that applies to user at login time
- Applies the configuration

Supported settings

- Web interface
 - Gnome Software highlighted applications
 - Gnome Online Accounts (In progress)
- Live Session
 - GSettings based Applications
 - LibreOffice
 - Network manager (preconfiguration of VPN, WiFi...)

Future releases

- Integration with FreeIPA
- Enhancements in UI and UX

Live demo

- Installation
- Create a simple profile
- Configure some settings
- Deploy that settings
